WING TRIP

SPRING TRIP ON
MOULDBOARD + WINGS

Box Blade

Traditional box blade.

Straight Blade

Up to 10' of extra clearing width on select models when fully extended.

Minimum Road Transfer Width

Approx. 9" narrower than main mouldboard width.

Reverse Box Blade

In full reverse box.

SPRING TRIP WINGS

Spring trip on mouldboard and wing cutting edges

Adjustable wings with integrated spring trip protection help absorb impacts and protect the blade when operating over uneven surfaces and hidden obstacles, while optional EdgeFlex technology delivers enhanced ground-following performance for cleaner scraping and improved surface contact.

SPRING TRIP WING FEATURES

1 Spring Trip Wing Edge

These models come standard with spring trip wing edge. This system is available with both the standard or the optional EdgeFlex cutting edge systems.

2 180° Rotary Actuators

These rugged units come from the construction industry and deliver up to 103,000 in-lb. of torque at 3000 PSI to hold the wings in place.

3 Floating Endplate Edge

Floating endplate edges follow the surface contour for confident snow clearing.

4 Curb Runner

A replaceable curb runner is incorporated into the wing trip edge.

**Rotary
Actuator**

Max Operating Weight: 60,000 lbs.

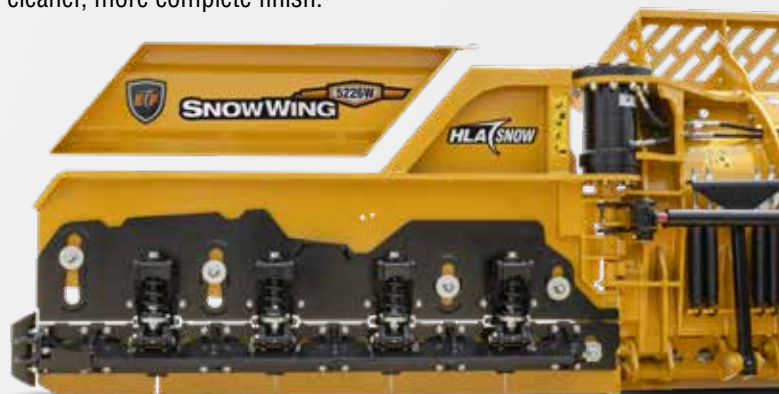

5 Tire Protection System

Our Tire Protection System means that you get the most out of your SnowWing while keeping the air in your tires. The system automatically protects from unintended damaging collisions between your front tires and end plates. The end plates are automatically rotated away from the tires so the operator can focus on clearing snow and worry less about damaging equipment.

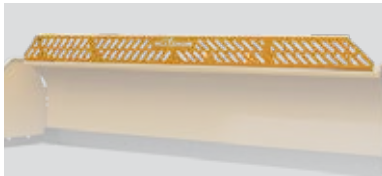

6 Contour Wing Design

Removable upper wing tips transform the wing into a contour-style design, allowing operators to clear beneath fifth-wheel truck pins and other hard-to-reach areas for a cleaner, more complete finish.

OPTIONS

Spill Guard

This option prevents snow from rolling over the mouldboard letting you push more snow and minimizing additional passes to clean up.

Foot Switch

The Foot Switch is a direct replacement for the 3-way toggle switch traditionally used to control the diverter valve on SnowWing plows.

Carbide

Life is 5-8x when compared to the standard steel edge.

Additional Options

- Floating Blade Hinge
- Snowblade Marker
- Quick Attach Snow Blade Mount

Optional EdgeFlex on mouldboard and wings

When selected at time of order, optional EdgeFlex cutting edges are installed on the main mouldboard and both wings, providing true one pass clearing across the entire width of the blade.
